### LOW INITIAL TQ, RESPONSIVE, & LONG LIFE

- Minimizes drivetrain power loss, great for underpowered vehicles
- Less chattering noise than conventional LSD systems
- Activated by RS coil springs which are designed not to lose its pressure consistency for a stable and extended performance use.
- A more direct feeling due to activation and pressure direction being on the same axis for improved throttle control.

### HIGH INITIAL TQ, LINEAR ENGAGEMENT

- The Type MZ is designed where the activation pressure opposes the direction of the initial torque with the utilization of cone springs.
- Available for various driveline setups that require higher initial torque setting for activation.
- Suited for high horsepower vehicles that requires maximum traction.
